

Welcome

# Installing MongoDB on Windows

## Step 1

# Install the community Edition

[Installation Link](#)

## Step 2

Run the installed MongoDB windows installer package that you just downloaded

MongoDB get installed here →

`C:\Program Files\MongoDB\Server\5.0\`

## Step 3

### Let's set MongoDB environment

- (a) Create data directory where all data is stored

On C: drive create a folder data inside it create a folder db  
or

Run

```
md C:\data\db
```

## Step 3

Let's set MongoDB environment

- (b) To start MongoDB

Run

```
"C:\Program Files\MongoDB\Server\5.0\bin\mongod.exe"
```

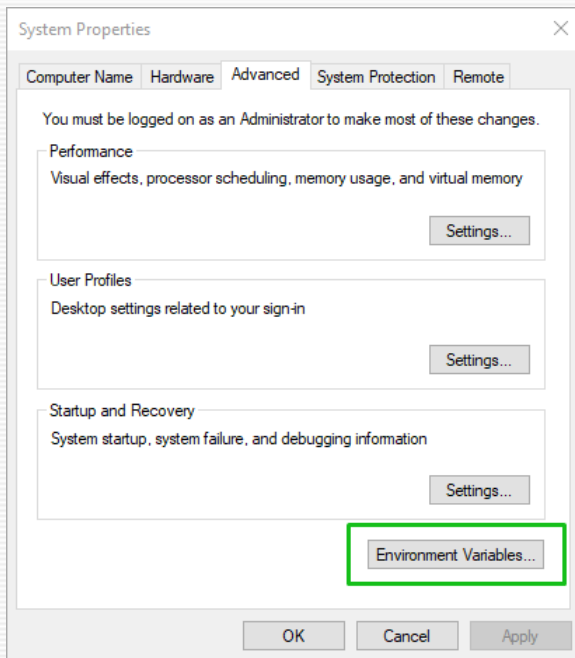

Wait till the connection message appears

## Step 3

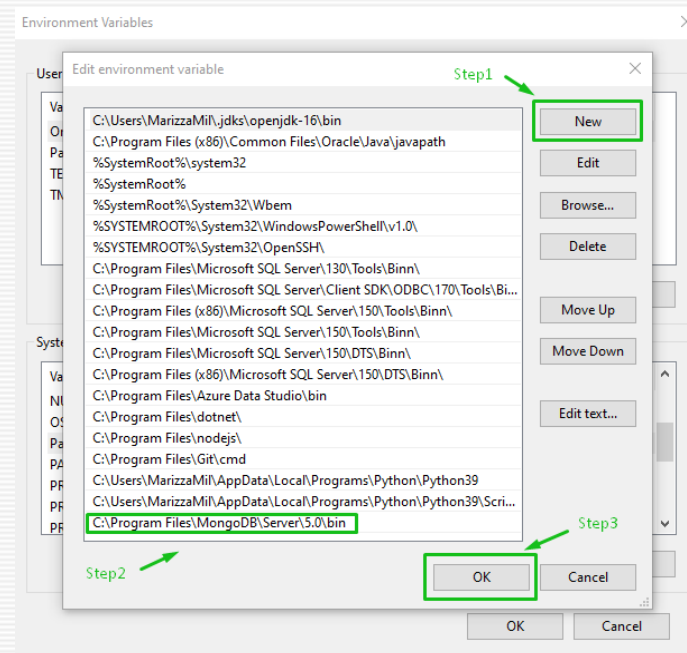

# Let's set MongoDB environment

- (c) Verify Environment Path or set path if not correctly set

Open environment variables, you can search this by windows search

Open Environment Variable under the System variables section open Path. This would look like this.

## Step 3

Let's set MongoDB environment

- (d) To Connect to MongoDB

Open other command prompt and run

```
C:\Program Files\MongoDB\Server\5.0\bin\mongo.exe
```

## Step 4

### Ready MongoDB

Open Command Prompt(Admin mode) type and run:

```
mongod
```

Congratulations!!  
Installation completed

In every future lesson I'm going to assume that you've got this running in the background
