

# Models and Collections

## Collections, schemas and models

How put it into practise by creating a new model  
and schema for our project

# MongoDB

DataBase 1

Mario  
Characters

Donkey Kong  
Characters

DataBase 2

Currenciens

Flags

# Collection

DataBase 1

Mario  
Characters

Donkey Kong  
Characters

Mario Characters

```
{  
  Name: 'Mario',  
  Weight: 60  
}
```

```
{  
  Name: 'Luigi',  
  Weight: 60  
}
```

Create folder "models"

- Create file "mariochar.js"

```
const mongoose = require('mongoose');
const Schema = mongoose.Schema;

// Create a Schema and a Model

const MarioCharSchema = new Schema({
  name: String,
  weight: Number
});

const MarioChar = mongoose.model('mariochar', MarioCharSchema);

module.exports = MarioChar;
```

Fields

Types fields values

We have created  
Model and Schema

thank you!
